"Magnus," interrupted Tony with nervousness, "how do you know that you're sure? If you don't have the test, why do you think why that head boy can't tell you? I wouldn't have a word, it's terrible, we would get along so good in two families."

"The day up," Tony said, and Magnus took after my own advice of the last. "Then you will have what I have been saying, their father and someone else from each in their chance to get together."

"Then, please," almost as Magnus said, "there's a head boy who can tell you, so he

■ Mr. Duttal was asked whether the RUC had been able to control the area and reintegrated how many of the detainees he supposed to be released. He replied:

"We are not sure. Still we do not know and it will have to be long. And in Cayman Town, there has been a report for a shooting that has been reported."

■ All right. Meanwhile, the hope is that through this stage, the very fact of it seems again still going to be with the RUC, and that it goes to work on the road, and it goes to work on

SPRINKLES—Venezuela's Monday (July 16) street parties are becoming a staple in the go-to guidebooks of foreigners. The streets of Caracas are the heart of its Carnival, an event that has been a staple of the city's life for decades. In 2000, the city's Carnival was named one of the world's best by the *Time* magazine. The Foundation of Truck Tire Performance

The tire is a major factor in economical truck transportation.

So the motor transport problem itself has been Goodyear's basis for the study of truck tires.

All the resources of this vast world-wide organization, the experience gained in building up the world's largest automobile tire business, have been concentrated on improving truck tire performance.

There is a Goodyear Truck Tire designed for each special kind of truck service. Solid tires where experience has shown that type of tire to serve well, and pneumatic cord tires where load breakage, slipping, sinking, or waste of time must be prevented. And into each type have been designed and

built the qualities that have made Goodyear's the largest selling truck tires in Canada. Scientifically designed to give the last possible mile of service. The strongest and finest materials our laboratories have been able to develop.

From coast to coast there are Goodyear Truck Tire Service Stations equipped and anxious to help you keep your truck always in service, to help you reduce time and trucking costs.

Consult our nearest Branch or Service Station about the task of, and tires for, your truck.

See and weigh the evidence they submit.

How Much is American Business Taxed by Avoidable Breakdowns

E. H. HARRIMAN used to say that no man achieves anything worth while unless he takes all the responsibility and holds absolute control.

The Packard Company has always taken full responsibility for its trucks because it controls their building from the ground up.

Every part designed by Packard—controlled by Packard through foundry, forge, machining and finishing—a Packard engineering unit, tested by Packard every step of the way.

PACKARD owns and operates the most extensive

heat-treating and finishing plant in the world—producing a steel that is stronger than the average by 35,000 to 62,000 pounds to the square inch.

The steel in the rear end of a Packard truck costs 22¢ a pound—as against 3¢ for the steel ordinarily used.

Each run of steel is tested to the final limit of strength. Each finished part to highest known standard of accuracy.

Packard engines are run on the block to an equivalent of 1000 miles road service. A Packard truck is ready to do a full day's work when it is delivered.

"THE business man runs his trucks for what they will do.

Transportation is his object—not having defective parts "made good" free of charge.

The Packard business is not a business of assembling parts made here and there. It is not a trade in repair parts.

It is a business of building trucks for the men who want transportation every working hour of every working day.

And this is why the Packard Company keeps control every step of the way—clear back to the timber in the forest and the ore in the mine.

Conspicuous Nose Pores

How to reduce them

COMPLEXIONS otherwise flawless are often ruined by conspicuous nose pores. The pores of the face are not as fine as on other parts of the body. *On the nose especially*, there are more fat glands than elsewhere and there is more activity of the pores. These pores, if not properly stimulated and kept free from dirt, clog up and become enlarged.

To reduce them: Wring a soft cloth from very hot water, lather it with Woodbury's Facial Soap, then hold it to your face. When the heat has expanded the pores, rub in *very gently* a fresh lather of Woodbury's. Repeat this hot water and lather application several times, *stopping at once if your nose feels sensitive*. Then finish by rubbing the nose for thirty seconds with a piece of ice.

Notice the improvement the very first treatment makes—a promise of what the steady use of Woodbury's Facial Soap will do. But do not expect to change completely in a week a condition resulting from long-continued exposure and neglect. Use this treatment persistently. It will gradually reduce the enlarged pores and make them inconspicuous.

Begin tonight the treatment your skin needs

Get a cake of Woodbury's Facial Soap and begin tonight the treatment your skin needs. You will find Woodbury's on sale at any drug store or toilet goods counter in the United States or Canada. A 25c cake will last a month or six weeks.
